Molecular Biology And Biochemistry - 2 [Win/Mac]

Molecular Biology and Biochemistry - 2 Crack is a game of H₂O In which players must predict whether or not common household events can result in water molecules joining to make a bigger one.

Molecular Biology and
Biochemistry - 2 Questions: 1.
Every time you make a mess
in the kitchen sink and turn on
the faucet to flush it away,

you A. Are creating more water molecules. B. Are preventing water molecules from joining together. C. Are preventing water molecules from joining together by separating them. D. Are splitting water molecules into smaller ones.

3. By how much does the pH of water increase if you freeze it? A..01 pH units B..1 pH units C..2 pH units D..3 pH units

4. How long does it take for water to freeze at 0°C? A. Seconds B. Seconds per centigrade C. Minutes per

centigrade D. Minutes per degree centigrade 5. In an H₂O solution, iron (Fe) is a A. Defective mineral. B. Water-absorbing molecule. C. A catalyst of changes. D. A solubilizing acid. 6. In H₂O solutions, protons are A. Molecules that are attracted to oxygen. B. Molecules that are attracted to oxygen. C. Molecules that are attracted to oxygen. D. Molecules that are attracted to oxygen. 7. In the solution of an acid and a base, the rate of reaction is A.

Increased by the presence of water. B. Decreased by the presence of water. C. Decreased by the presence of water. D. Decreased by the presence of water. 8. In H₂O solutions, water is A. A defective mineral. B. a perfect insulator. C. attractive to oxygen molecules. D. a reactant. 9. Water molecules are A. Water-absor

1) Water is a chemical compound of the following

substances: a) Molecular units
b) Molecules c) Atoms d)
Subatomic particles

ANSWERS: a) Molecular Units.

The graph at the right depicts the various phases of water.

Interstate Phase The phase is

b) Molecules. Local Phase The phase is c) Atoms. Local Ions

The phase is d) Subatomic Particles. A) Water B) Oxygen

C) Hydrogen D) Neutrons

ANSWERS: D) Neutrons. 2)

The problem of osmosis is due to the movement of water in a direction opposite the normal

movement of water through a membrane when such a membrane is under a a) large osmotic pressure gradient b) small osmotic pressure gradient c) large solute pressure gradient d) small solute pressure gradient

ANSWERS: b) Small Solute Pressure Gradient

3) The subject of osmosis is often called “the active transport of water by a membrane against a concentration gradient.”

This is an accurate statement since there is a net movement

of water across the membrane into the cell for two reasons, (1) a chemical potential gradient and (2) osmotic pressure gradient. a) For why there is a chemical potential gradient, see below: A) Precipitate. B) Absorb water. C) Fluctuate between two states. D) All of the above

ANSWERS: B) Absorb water.

The graph at the right depicts the two processes which occur during osmosis. The first process is called "Osmosis by Diffusion" The second process

is called “Osmosis by Convection” 4) To test the concept of osmosis, let us first examine the movement of water in a cell by passive diffusion. The cells in the body contain fluid, hence contain water. Water molecules are present in the water, hence the cell’s water should be like pure water. A) Not true. Water molecules are present in the cell’s water but they may have been produced by cellular metabolism. B) True. In the body, there are many types of

cells with different chemical and physical properties. There are many different kinds of water molecules. C) True. Cell water is controlled

The majority of modern biological research is conducted using the tools of molecular biology.

Transcription of DNA into RNA, translation of RNA into amino acid chains, and modification of the amino acid chains to form a myriad of secondary and tertiary cellular components are all fundamental processes in the synthesis of biological products. This molecular

biology-based research is conducted by scientists at a wide variety of universities, colleges, and governmental laboratories. At the turn of the century, it was increasingly evident that a molecular approach to these processes would lead to a much greater understanding of the "machinery" of biological systems. If this inorganic chemistry-based puzzle game has intrigued you, then I suggest you download Molecular Biology and

What's New in the Molecular Biology And Biochemistry - 2?

Molecular Biology and Biochemistry - 2 is an Java-

based program consisting of twelve multiple-choice tests. Each test consists of fifty questions, and if the student fails to provide the correct answer, that student may fail the entire test. The program will record any answer provided during the test for later review by the student. The program also contains a glossary, conversion tables, and a discussion of the law of conservation of mass. Molecular Biology and Biochemistry - 2 includes four

print options, a form to enter results, and an option for molecular biology and biochemistry students to calculate the average score. It is not necessary to pass each test in order to go to the next section. Molecular Biology and Biochemistry - 2 Features: A Java-based program with twelve multiple-choice tests that consists of fifty questions in total Functions on all platforms, including desktop, laptop, and cellular devices Record answers for later

review by the student
Participation is unlimited
Allows students to work at
their own pace through each
test Allows students to see
how they did on the last test
Calculates the average score
of all tests Allows for the
printing of the test, for the
submission of the test, and for
the electronic file of the test
Allows for the submission of a
summary of the tests and a
printable report of their
average score. Molecular
